1. What will be your top 3 priorities for this year?
   Ans:
   Following are my top 3 priorities for this year:
   a. I want to learn how a software project is completed professionally from scratch.
   b. I want to study about Machine Learning and Artificial Intelligence.
   c. I want to develop proficiency in flutter and node js.

2. What action steps will you take to achieve your top 3 priorities?
   Ans:
   I will practice flutter and node js from different platforms to gain in-depth knowledge about them. I am thinking of doing projects. At the beginning I would take help from YouTube and documentation while doing projects and later on I am thinking of doing projects on my own after having sound knowledge.

   I am eager to work in a software company so that I can understand the working of Software Development Life Cycle in real time. So, I will try to apply for an internship.

   I will try to attain workshops and seminars about machine learning and AI. I will also watch YouTube videos and read documentation related to them.

3. What challenges do you anticipate to successfully achieve your top 3 priorities?
   Ans:
   I think one of the biggest challenges will be to manage university course and learning new technical skills. If any problem occurs, I am confident that I will solve that problem an continue towards my goals.
